ISOLSBARRA

FIRE BARRIER ASSEMBLY INSTRUCTIONS

- 1. Fire barrier element is premounted on a straight element or elbow of Isolsbarra.
- 2. The fire barrier is recognisable by a red label on the external part of the element.
- 3. The fire barrier must be placed inside the wall / ceiling.
- 4. The position is correct when the red label is all inside the wall.
- 5. When the element is inside the wall, the empty space around it must be filled by concrete or fire resistant material (not supplied by Graziadio)
- 6. The aluminium cover allows the use of almost all the filling materials (cement, rock wool, polyurethane foams, etc).
- 7. Before energise, make an insulation test as prescribed by IEC standard.
